THE FIRST CHOICE IN FREE-CHOICE SUPPLEMENTATION

- Low-moisture, cooked molasses supplements designed to enhance forage utilization and reduce labor.
- Supplies protein, energy, minerals, and vitamins your cattle need to optimize cow herd production and stocker performance.
- Controlled, consistent manageable consumption!
- Unique one way containers for added biosecurity.
- Save time and delivery costs.
- Available in environmentally friendly, biodegradable containers and durable recyclable plastic.

The Challenge: Provide supplemental nutrient intake and utilization necessary for managing a productively efficient and profitable cow herd when beef cows are fed low to average quality roughages, or when quality is unknown.

The Answer: **RangeLand 30-13 Tub**

- 30% crude protein from animal and plant protein sources as well as a research-proven non-protein nitrogen level.
- Get more for your feed dollars spent by increasing forage intake and digestibility.

The Challenge: Provide supplemental nutrient intake and utilization necessary for managing a reproductively efficient and profitable cow herd when beef cows are fed low to average quality roughages or when forage quality is unknown.

The Answer: **RangeLand 25 All Natural**

- 25% all-natural crude protein from a blend of safe animal and plant protein sources
- Nutrient dense; provides energy and optimum levels of minerals and vitamins.

The Challenge: Provide supplemental nutrient intake and utilization necessary for managing a reproductively efficient and profitable cow herd when beef cows are fed average to higher-quality containers.

The Answer: **RangeLand 17 Tub**

- 17% all-natural crude protein from a blend of animal and plant protein sources.
- Nutrient dense; provides energy and optimum levels of minerals and vitamins.

Also available with
4% Magnesium

The Challenge: Provide supplemental vitamins and minerals necessary for managing a reproductively efficient, profitable cow herd grazing under the most extensive pasture conditions.

The Answer: **RangeLand Mineral Tub**

- Nutritionally balanced package of vitamins and minerals to meet reproductive and performance demands.
- Flexibility to manage intake that fits a variety of physiological stages and grazing situations.

The Challenge: Provide supplemental Magnesium to beef cow grazing lush, actively-growing pastures that may be prone to grass tetany.

The Answer: **RangeLand 12+Mag Tub**

- 12% all-natural crude protein.
- 5.0% Magnesium.
- Energy dense package formulated to enhance utilization of forage, while providing supplemental magnesium.
- Palatable formula will ensure consistent intake of supplemental magnesium and other required vitamins and minerals.

The Challenge: Provide supplemental nutrient intake and utilization necessary for managing a productively efficient and profitable calf crop or starting calves in the feedlot.

The Answer: RangeLand HCP Stress Tub

- 13% all-natural crude protein from plant protein sources
- Highly fortified with vitamins and minerals to provide optimum nutrition to calves in stressed conditions either after weaning or in feedlot.

The Challenge: Provide supplemental nutrient intake and utilization necessary for growth and health to cattle, sheep, and horses.

The Answer: RangeLand All Stock 15% Tubs

- 15% all-natural crude protein from plant protein sources
- No added copper for use in proper sheep nutrition.

The Challenge: Provide supplemental nutrient intake and utilization necessary for managing a reproductively efficient and profitable dairy heifer replacement herd when they are fed low to average quality roughages or when forage quality is unknown.

The Answer: DairyLand Heifer Tub

- Convenient product delivery system will help maintain acceptable heifer condition needed for reproductive demands.
- Supplement protein, energy, mineral, and vitamin deficiencies in forage.

The Challenge: Provide supplemental nutrient intake and utilization necessary for managing a far-off dry cow program when dry cows are fed low to average quality roughages, or when forage quality is unknown.

The Answer: DairyLand Dry Cow Tub

- Convenient product delivery system will help maintain acceptable dry cow condition needed for lactation demands.
- Supplement protein, energy, mineral, and vitamin deficiencies in forage.

The Challenge: Provide supplemental nutrient intake necessary for managing dairy cattle under stress conditions.

The Answer: DairyLand Stress Tub

- Convenient product delivery system will help supplement the dairy cow nutrition needed to help meet the demands of stressed cattle during dry, transition and early lactation.
- Supplement protein, energy, mineral, and vitamin deficiencies in forage.
